

- A Practice Test with answers is on Moodle

- If you can do the homework problems, follow examples in the texts, and get comfortable with my weekly lists of concepts, you should do well on the test!

- Test is Friday March 9. You can pick up the test at any time from 9:30 AM – 3:30 PM and return it 2 hours later. (If you are an extra-time person, please pick it up by 2:30 PM.)

- **If you have an unavoidable conflict (travel, athletics, other) please tell me soon so we can figure out when you are taking the test.**

- While the test is closed-book, you can use cheat sheets. (18 sides of pages, maximum ... average of 3 for each seminar meeting).

- You will need a scientific calculator, but please don't use a tool like Mathematica.

- There will be an opportunity to correct your test answers for partial credit.

- I'll email people who have taken the test directly, with the answers. (This is b/c there are some folks with travel conflicts who will take them a bit later than Friday.)

- If any answers don't match yours, you can take until the Wednesday after Spring Break at 10 A.M. to submit test corrections. Please put them in the grey lock box and/or email me a scan. (Yes, this time it is OK to email ☺)

- Definition: In a "test correction" you re-solve the problem to, hopefully, get the right answer. Process is more important than the answer (which you now have.) Please solve the problem in your best style, showing steps and explaining your thinking. Even if you can't get my answer, show me your calculation and tell me where you get stuck. This will bring you additional credit on the problem!

- Test corrections can be done open book using G&T and B&B and anything on our seminar website like my assignment notes, solutions to problems, presentations, documents under the Resources link. Corrections must be done without other references.
